Comments I. Maddieson

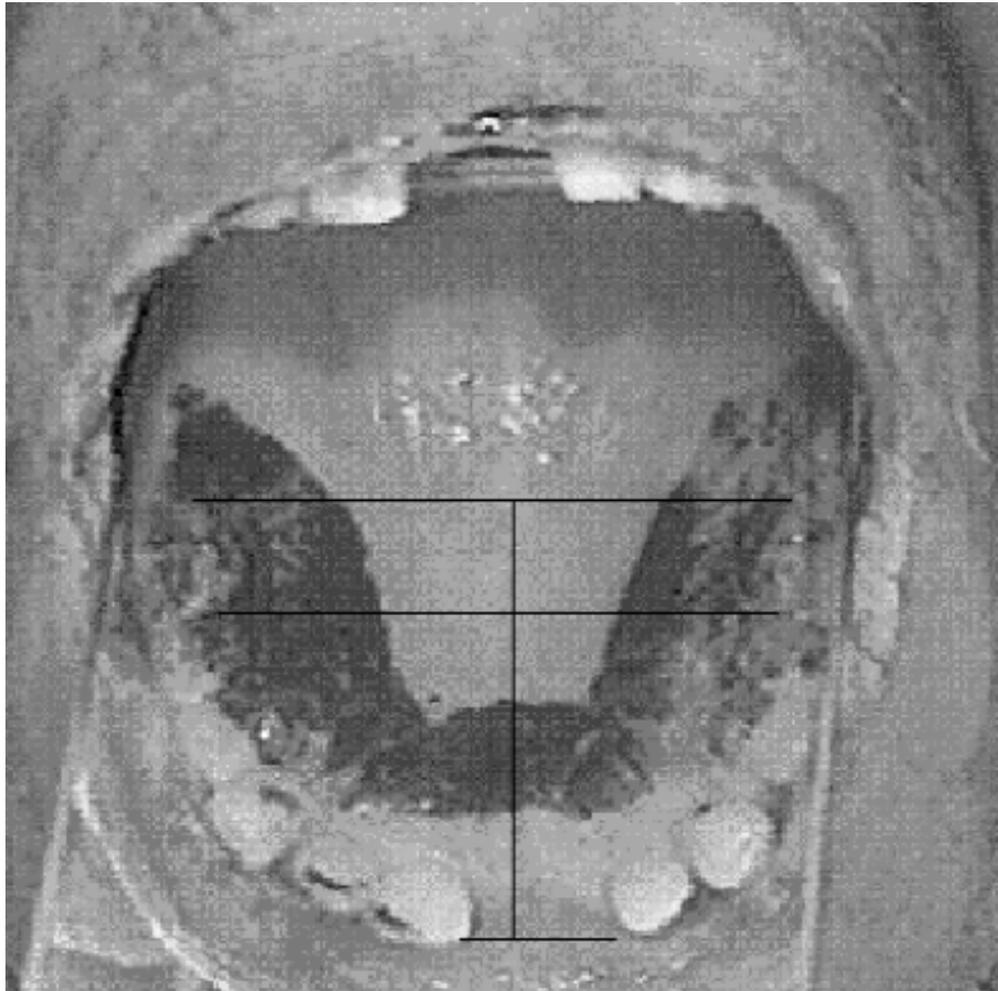

Western Arrernte (w. of Alice Springs, N.T.,
central Australia) laminal dental /t̪/

Broad contact all
along inside
surface of upper
teeth and beyond.
Photographs courtesy
of Victoria B.
Anderson

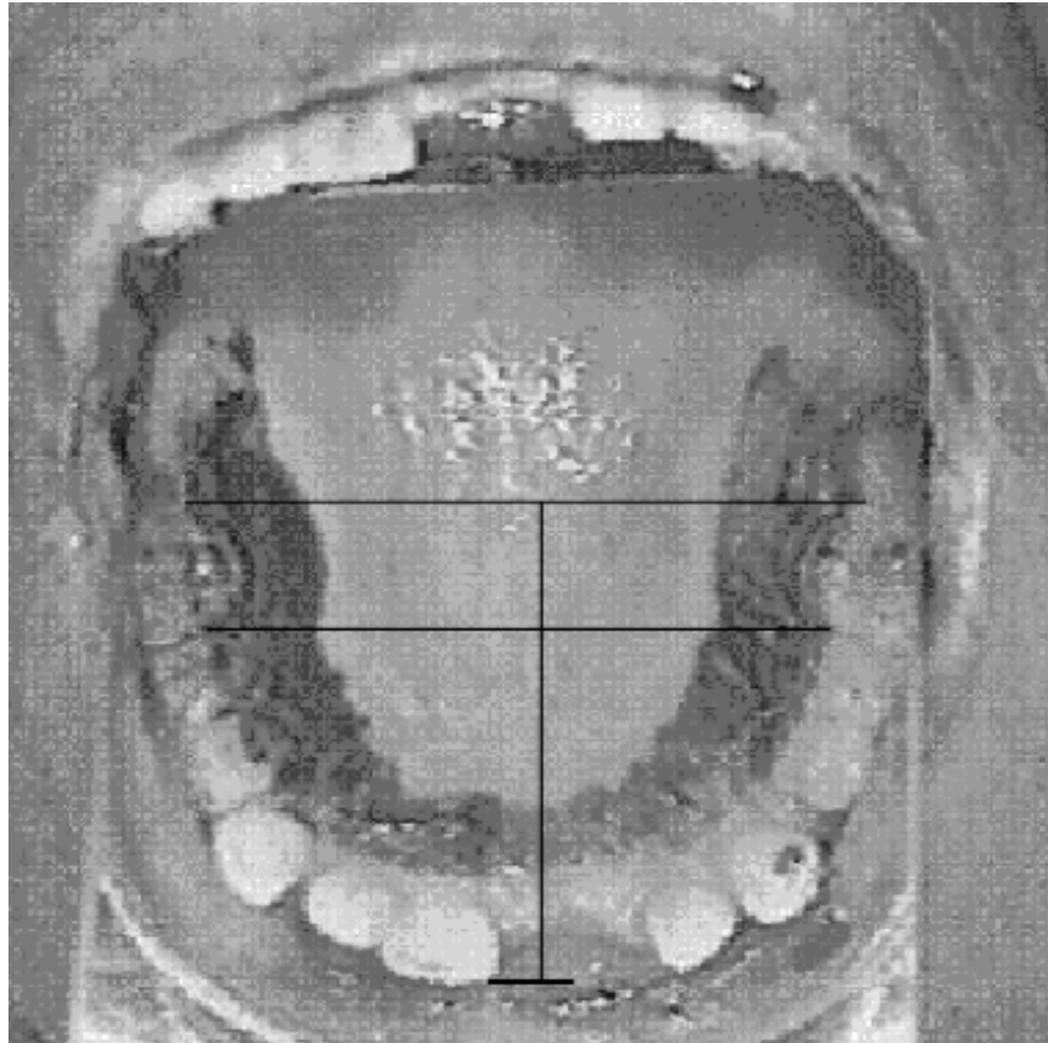

W. Arrernte laminal post-alveolar /t/

Broad contact well behind the upper teeth in the mid-line (partially on teeth in the region of the molars)

W. Arrernte apical alveolar /t/

Narrow contact just behind the upper teeth in the mid-line (again, partially on teeth in the region of the molars)

W. Arrernte apical post-alveolar /t/ ('retroflex')

Relatively narrow contact well behind the upper teeth in the mid-line. Some smearing of contact pattern probably indicates movement of the point of contact during the closure
